PRODUCT OVERVIEW

Every seat. Booked right.

Booking Platform is a reservation system for restaurants, clubs, lounges, meeting rooms, spas and courts. It brings the staff booking board, online booking, deposits and live floor management into one product.

Multi-venue | Real-time | Mobile-first booking | Deposits

THE PROBLEM

Bookings still run on phones, paper and hope

Every venue that sells time faces the same four headaches.

Double bookings

Two hosts, one table, one awkward evening. Spreadsheets cannot stop two people booking the same slot.

No-shows

An empty table on a full book is lost revenue that cannot be won back later that night.

Phone-only

Guests want to book at 23:00 from the couch, not wait on hold during the dinner rush.

Many locations

Each site runs its own book. Nobody sees the whole business, and every venue sets itself up differently.

THE SOLUTION

One platform, three experiences

Staff, guests and owners all work from the same live data, so what the host sees is what the guest can book.

Staff console

Dashboard, live booking board with timeline, floor and list views, a three-step booking dialog, customers and walk-ins.

Guest booking

A branded, mobile-first booking page with no account needed. It handles deposits, confirmation emails and a private link to cancel.

Business owner

Venues, opening hours, tables and floor plans, team roles, reports, branding and an audit trail of every change.

ANY VENUE THAT SELLS TIME

One model, from tables to tennis courts

Nothing in the booking engine is restaurant-specific. A table, a booth, a meeting room and a padel court are all bookable resources.

WORKSPACE
Demo Hospitality
The business. One login can belong to several.

›

VENUE
Demo Restaurant
Address, time zone, opening hours, booking rules.

›

SECTION
Terrace
An area: main floor, bar, VIP lounge, floor 2.

›

RESOURCE
Table 6
Seats 4–6. Can join others as a combination.

›

BOOKING
Naledi · 6 · 19:30
Holds one or more resources for a time slot.

Restaurants · Clubs & lounges · Meeting rooms · Coworking · Spas · Sports courts · Event venues

PART ONE

A shift at the host stand

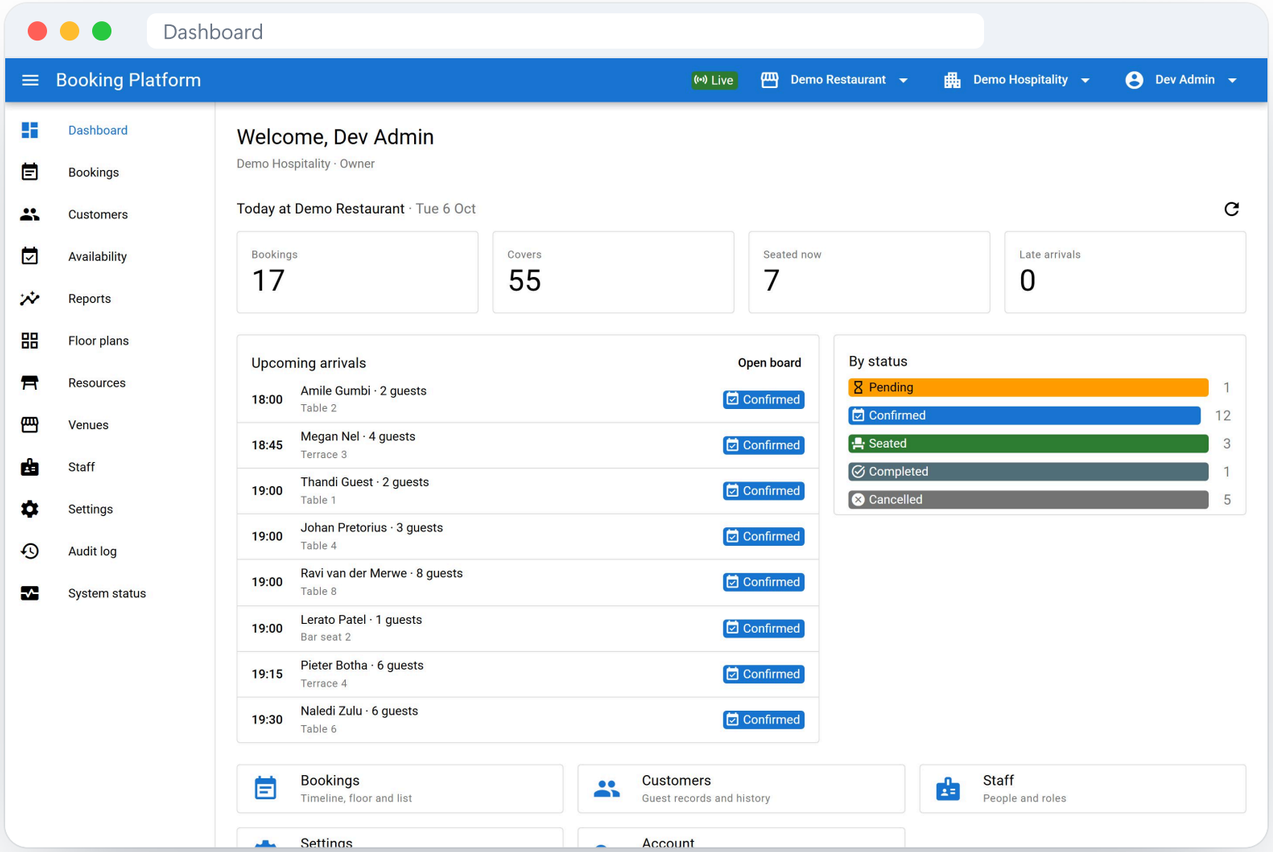

From the first coffee to the last table, with the real screens.

01

DASHBOARD

Start every shift knowing what's coming

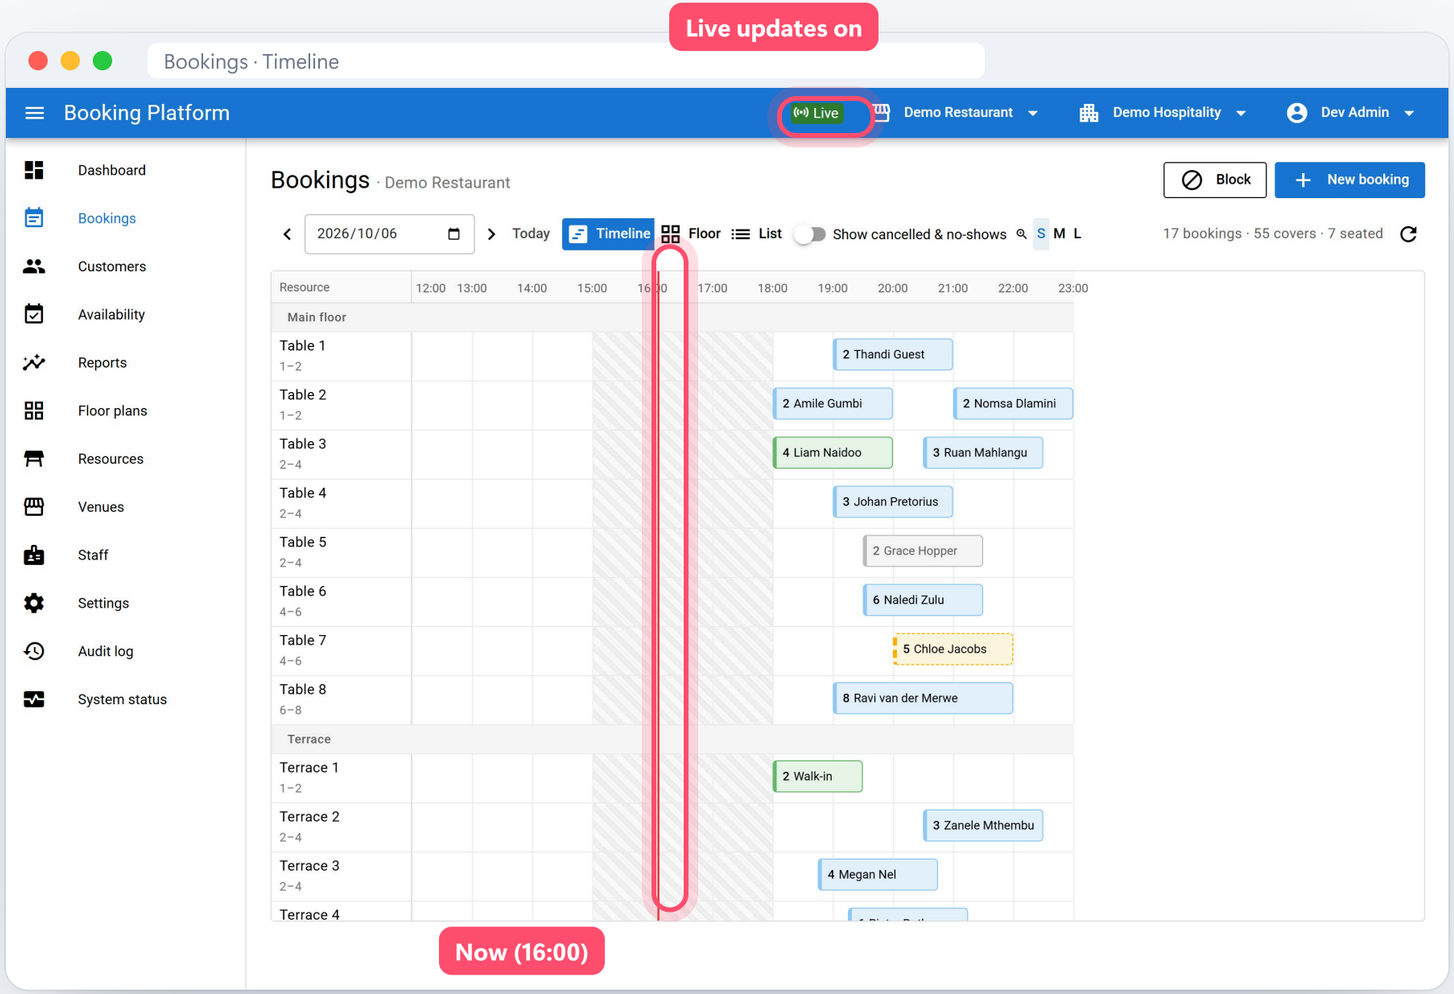

- **Today at a glance:** bookings, covers, guests seated now and late arrivals.
- **Upcoming arrivals:** the next eight guests, with late ones flagged in red.
- **By status:** how much of tonight is confirmed, pending or already seated.
- **Always current:** updates live as colleagues and guests book.

BOOKING BOARD

The whole evening on one screen

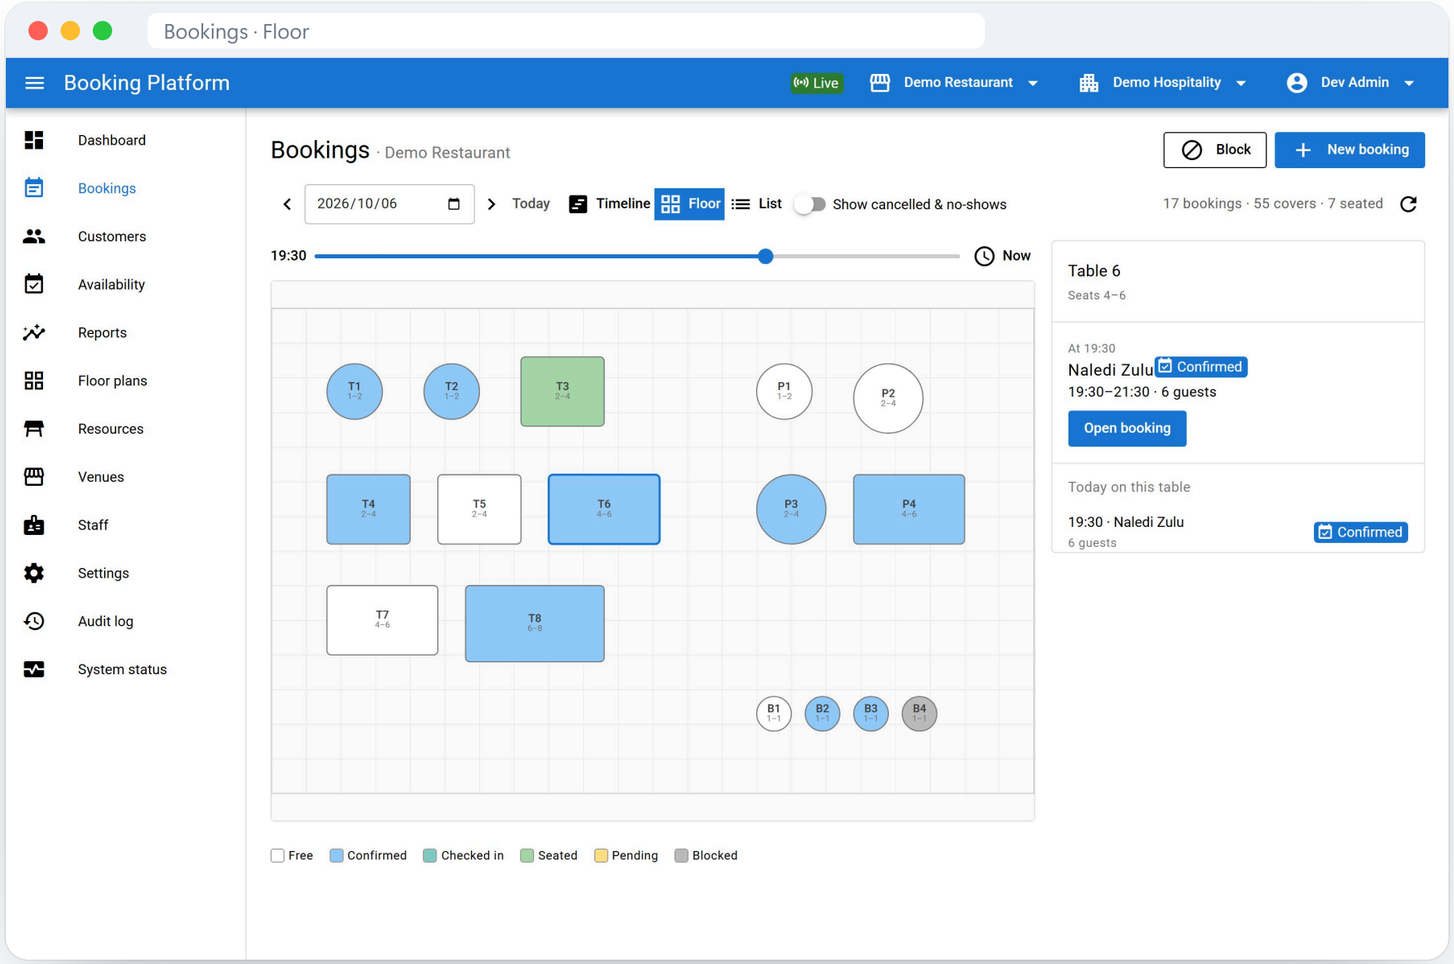

- **Every table, every booking**, grouped by section, in the venue's own time zone.
- **Drag to move** a booking to another time or table.
- **Double-click a gap** to book that table at that time.
- **Live:** changes from other devices appear instantly.

FLOOR VIEW

See the room, not a spreadsheet

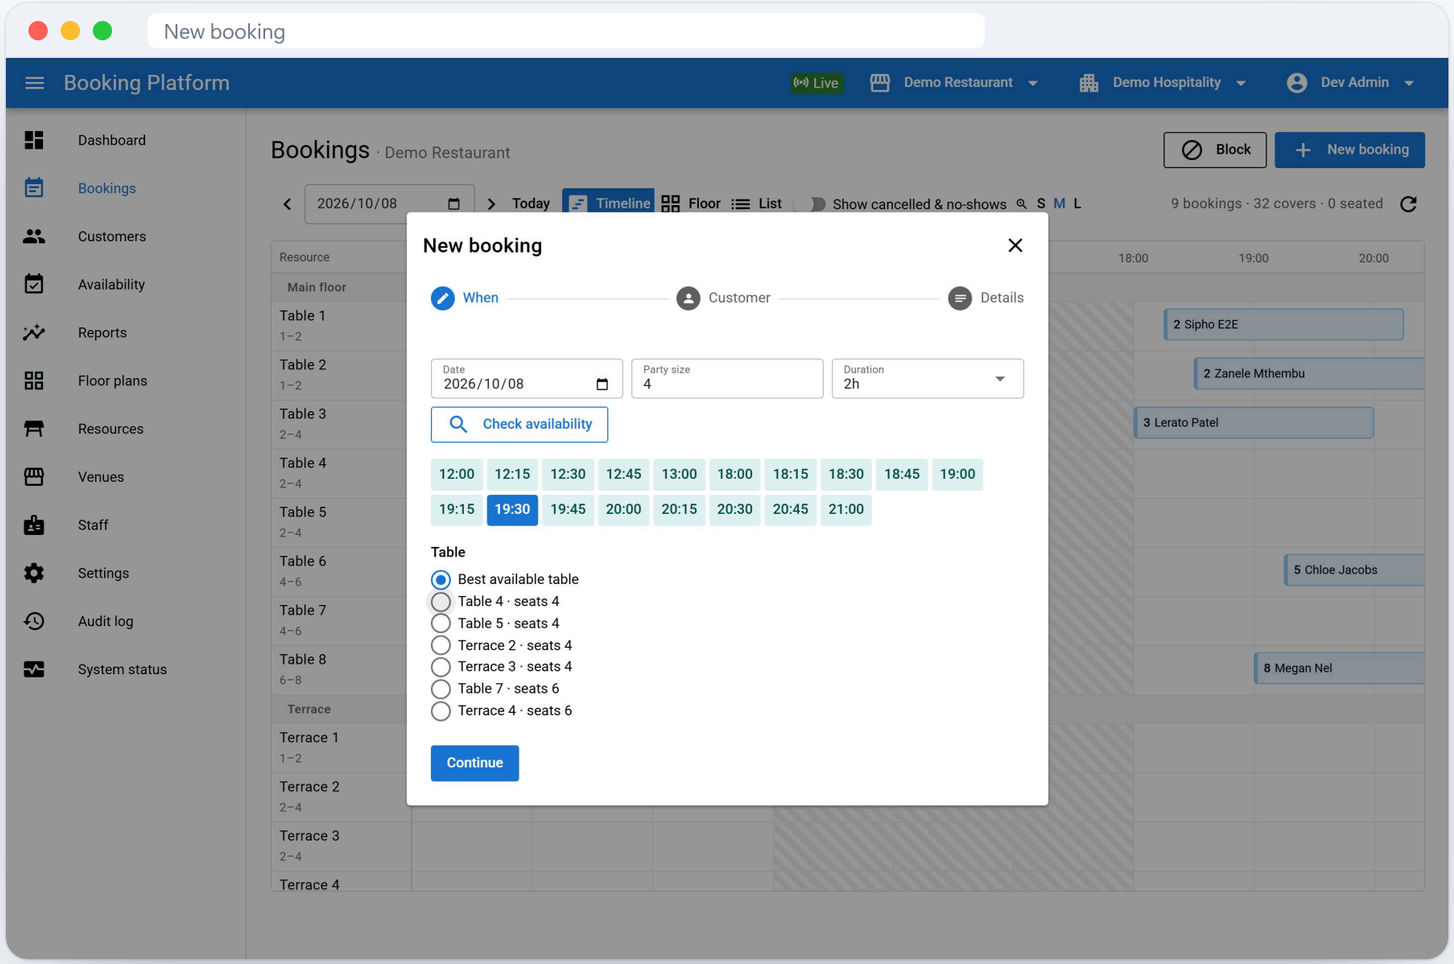

- **Scrub through time** with the slider to see the room at 19:30, or press "Now".
- **Colour is status:** free, confirmed, checked in, seated, pending or blocked.
- **Click a table** to see who is there, and what else is booked on it today.

TAKING A BOOKING

Three steps. No clashes.

- **When:** date, party size and duration, then only times that are really free.
- **The table is held** while you type the details, so nobody can take it from under you.
- **Best table picked automatically**, or choose one, including joined tables.
- **Walk-ins in seconds:** no name needed, seated straight away.

BOOKING LIFECYCLE

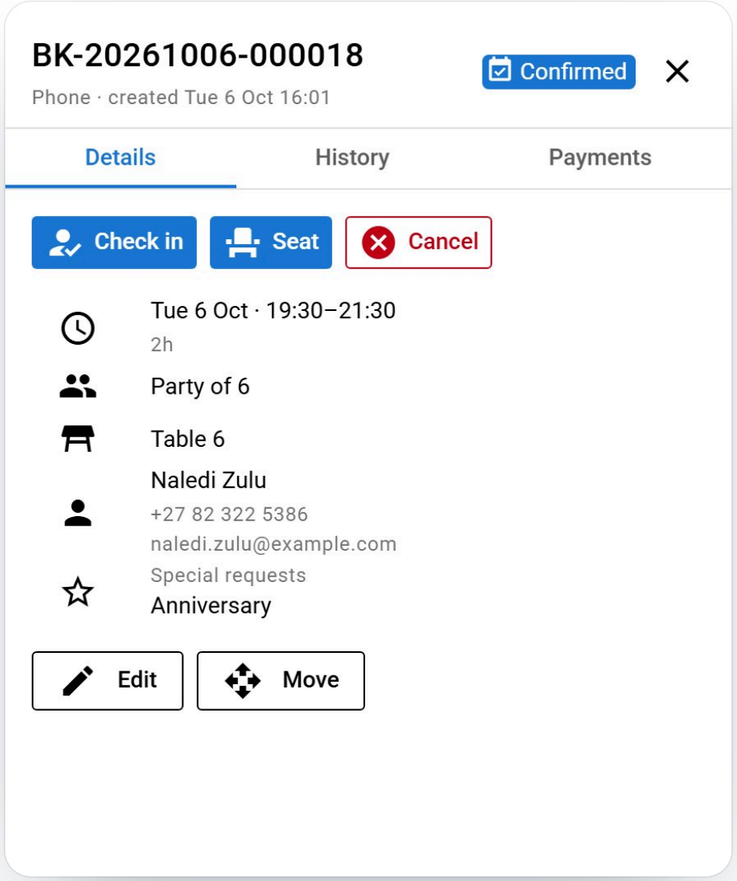

Every guest, from booked to gone

Pending → Confirmed → Checked in → Seated → Completed

Held waiting for an online deposit, then Confirmed

Cancelled **No-show** free the table immediately

- **One click per step:** only the actions that make sense right now are shown.
- **Nothing is ever deleted:** full history of every change, move and status.
- **No silent overwrites:** if a colleague edits the booking first, you're told.

PART TWO

The guest experience

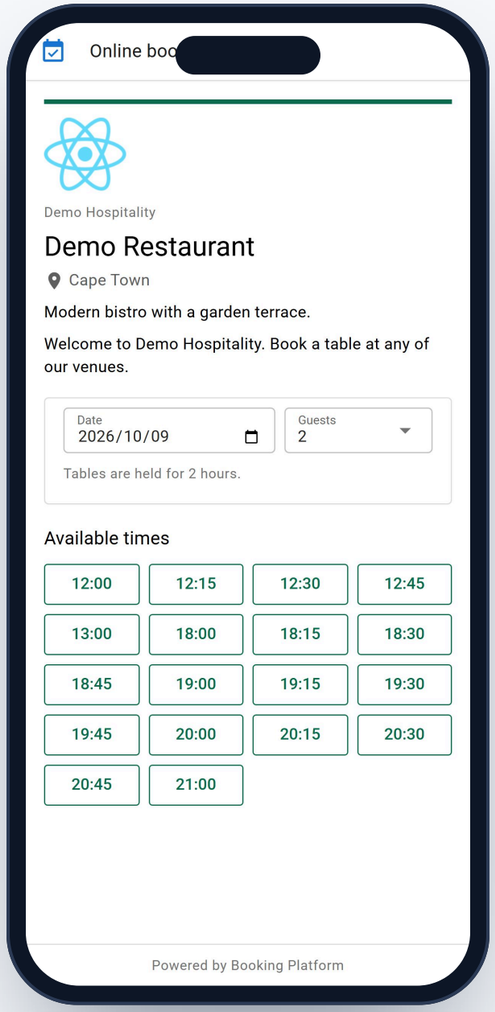

Book in under a minute, pay a deposit and manage the booking, all without an account.

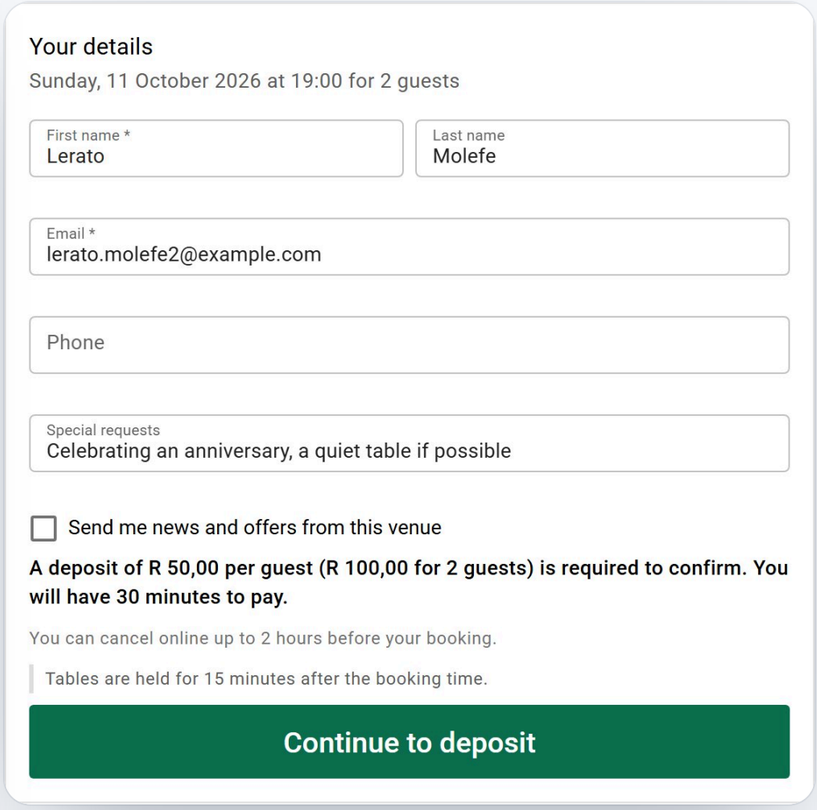

02

ONLINE BOOKING

Built for the phone in their pocket

- **Pick a date and party size**, then tap a time. Only bookable tables are offered.
- **No account, no password.** Name and email are enough.
- **Double taps are safe:** a nervous second tap never creates a second booking.
- **Your brand:** logo, colour, welcome message and booking terms.

DEPOSITS

Deposits that make no-shows expensive

Set a fixed amount per booking or per guest, and a time limit for paying. Unpaid bookings release the table automatically.

1

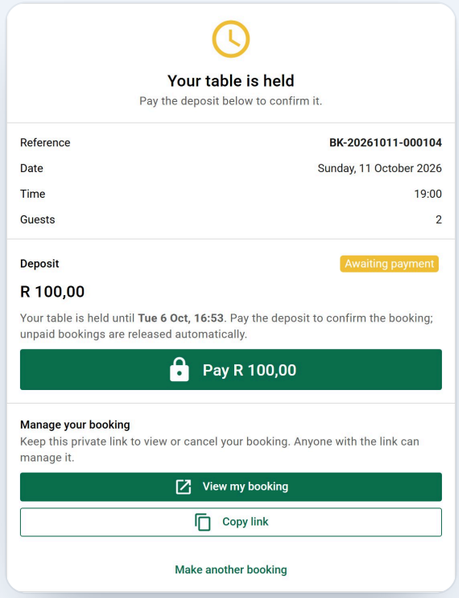

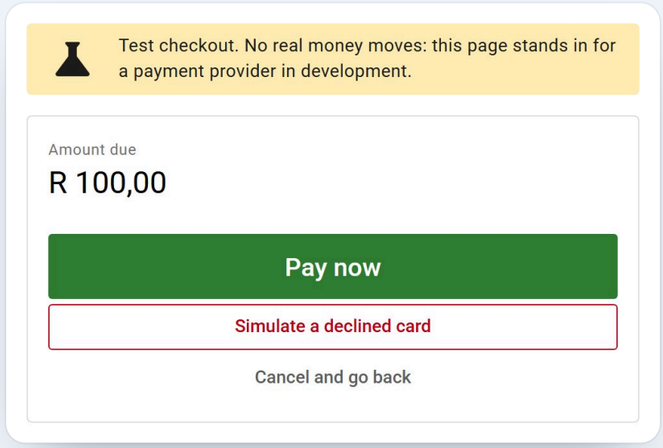

Table held

The booking is Held, and the guest has 30 minutes to pay.

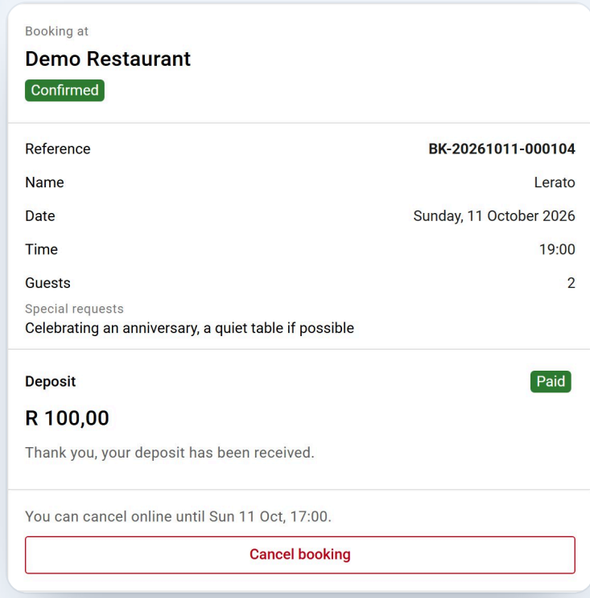

2

Secure checkout

The payment provider takes the card. A test checkout stands in for it in development.

3

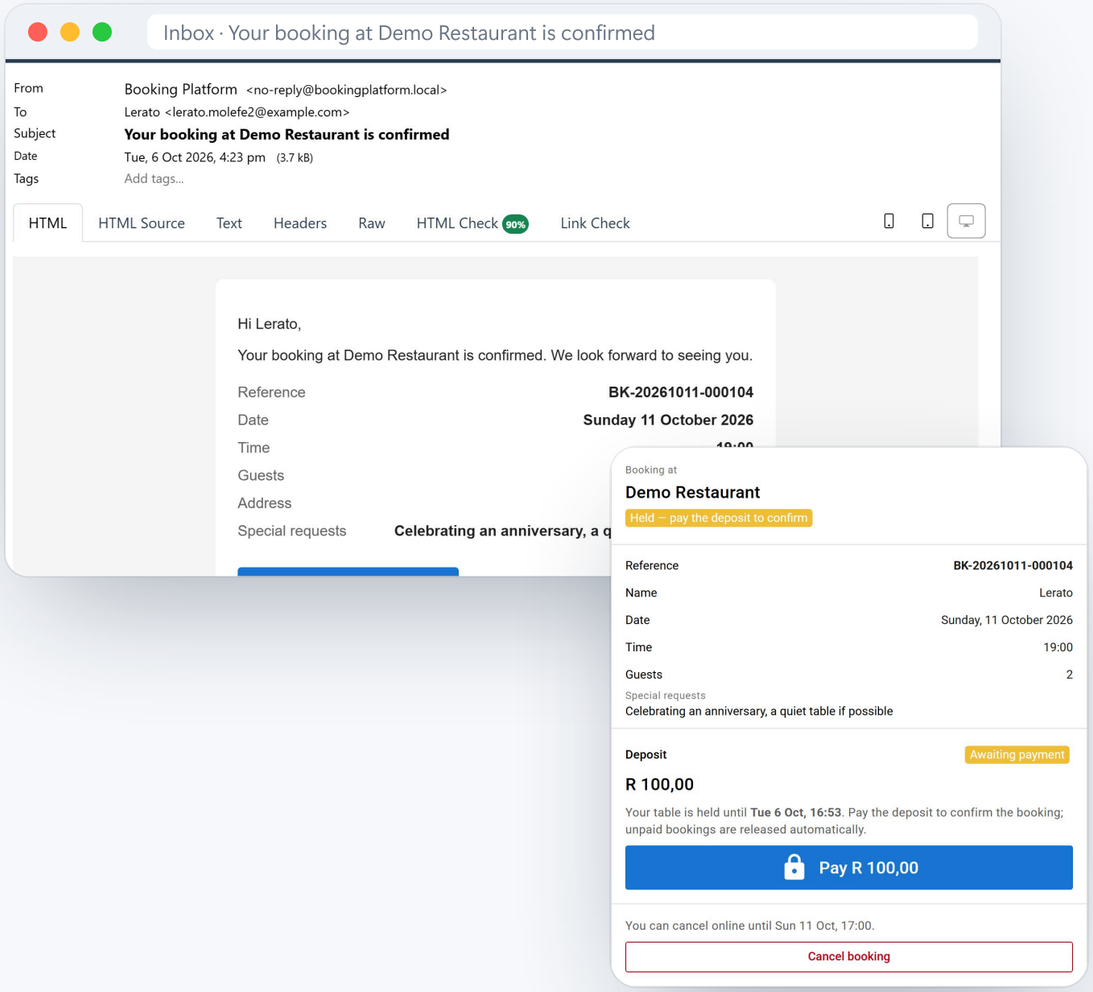

Paid, confirmed

The booking confirms itself and the guest gets an email. Staff can refund in full or in part.

STAY INFORMED

Guests stay informed and in control

- **Automatic emails** when a booking is requested, confirmed or cancelled.
- **A private link** to view the booking or cancel it until the venue's cutoff.
- **Replies reach the venue:** the reply-to address is the venue's own email.
- **Reliable delivery:** emails are queued in the same transaction as the booking and retried if the mail server is down.

PART THREE

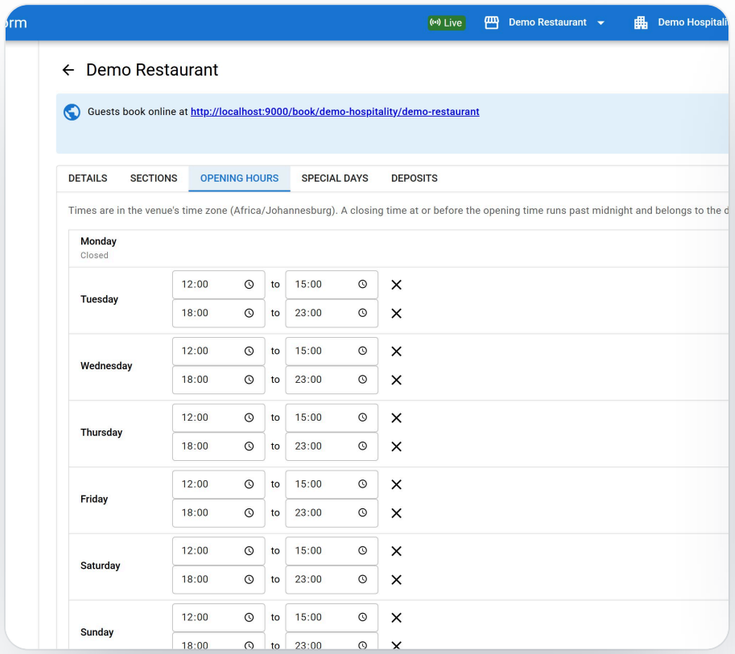

Running the business

Set up a venue in minutes, give every person the right access, and see what is working.

03

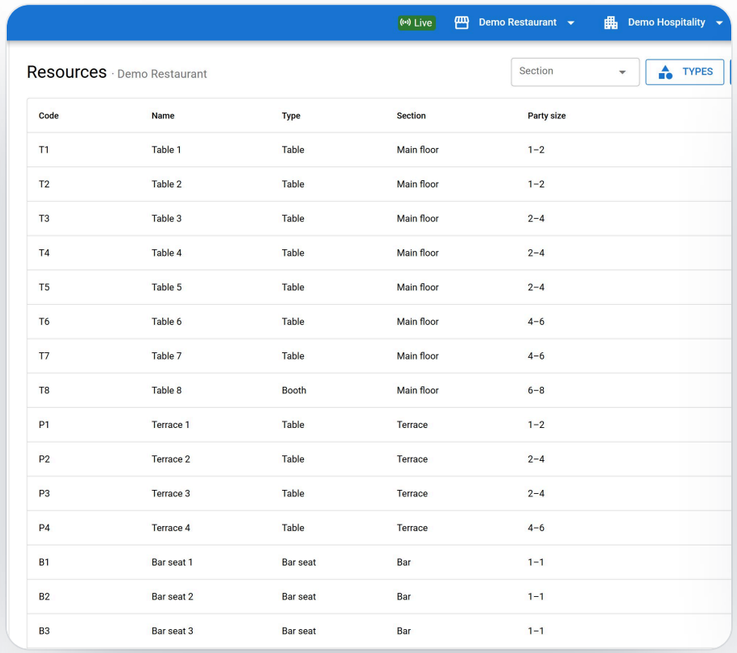

SETUP

Model any venue in minutes

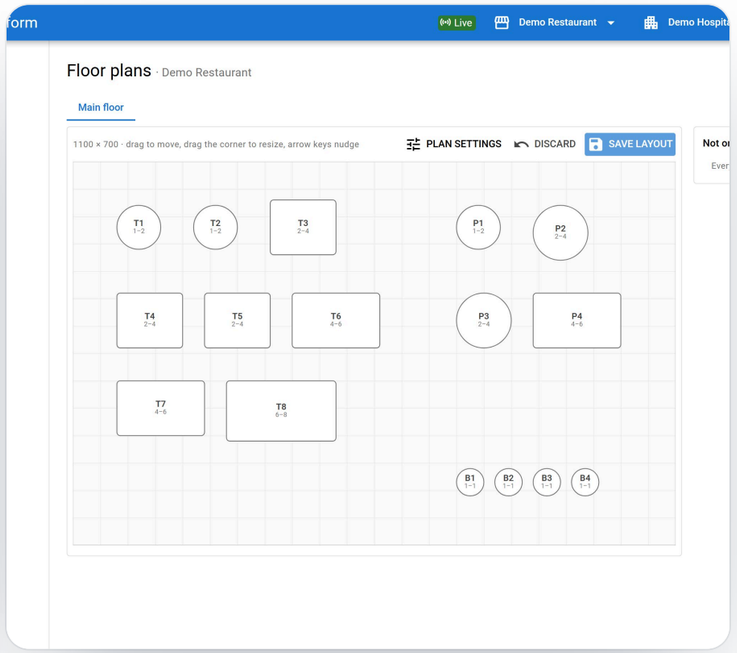

Opening hours

Several services a day, closing times past midnight, and special days for holidays and events.

Tables & resources

Types, capacities, sections, staff-only tables, and combinations for big groups.

Floor plans

Drag, resize and rotate tables. The live floor view uses the same plan.

TEAMS & PERMISSIONS

The right access for every person

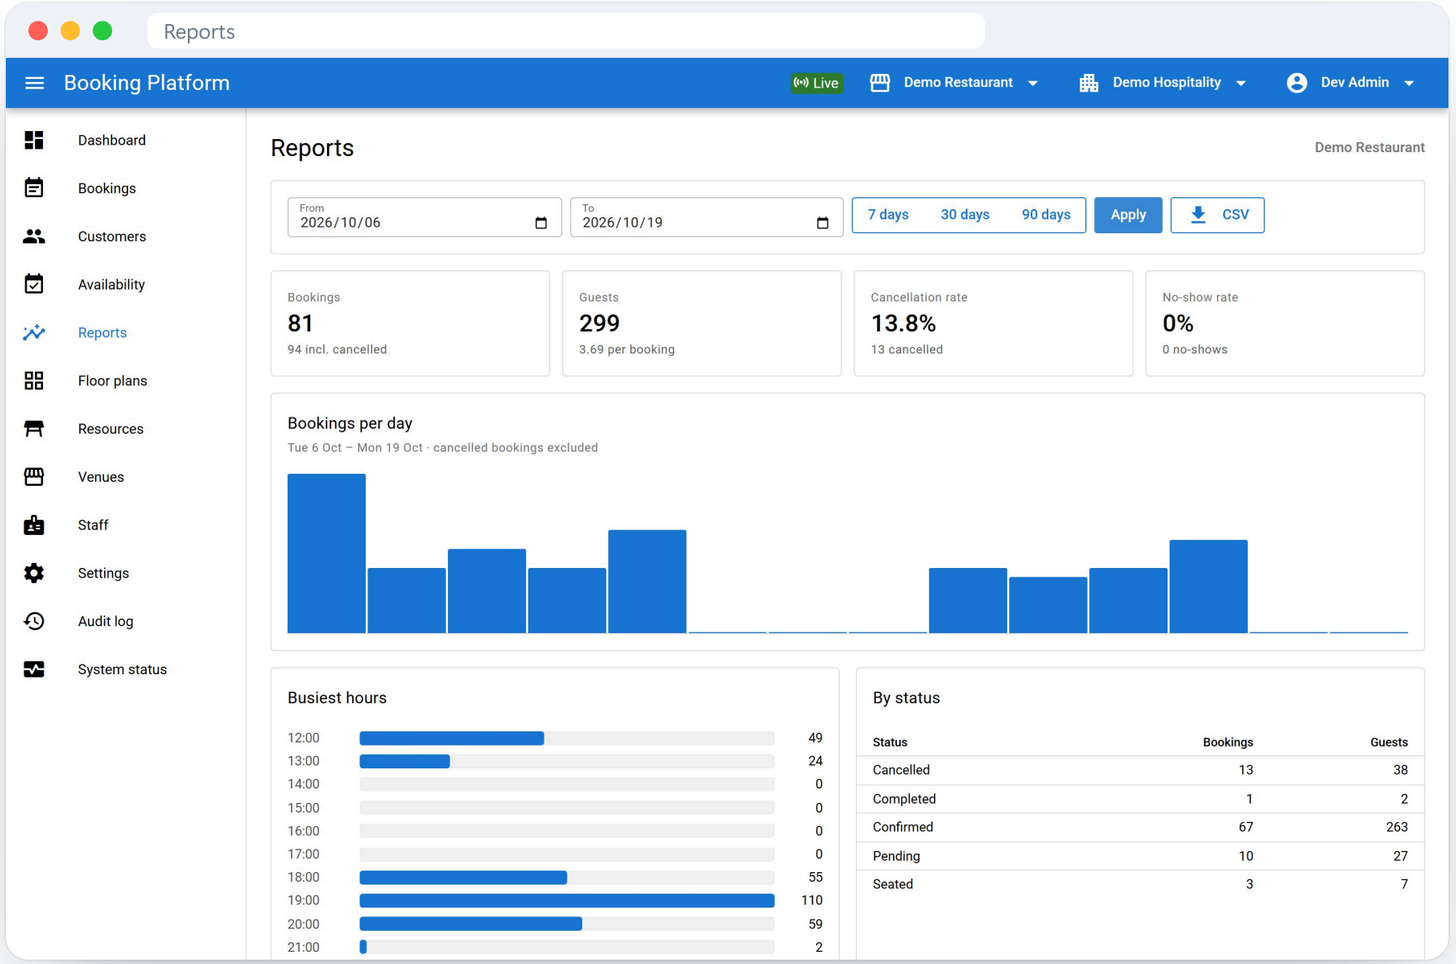

CAN…	OWNER / ADMIN	MANAGER	HOST	STAFF	VIEW ONLY
See bookings	●	●	●	●	●
Check in, seat, complete	●	●	●	●	—
Create, move, cancel	●	●	●	—	—
Tables, floor plans, reports, refunds	●	●	—	—	—
Venues, staff, settings, audit log	●	—	—	—	—

- **Venue-scoped:** people only see the venues they are assigned to.
- **Enforced by the server**, not just hidden buttons.
- **Instant offboarding:** deactivate someone and they are signed out at once.
- **Audit log:** who changed what, when, with before and after values.

REPORTS

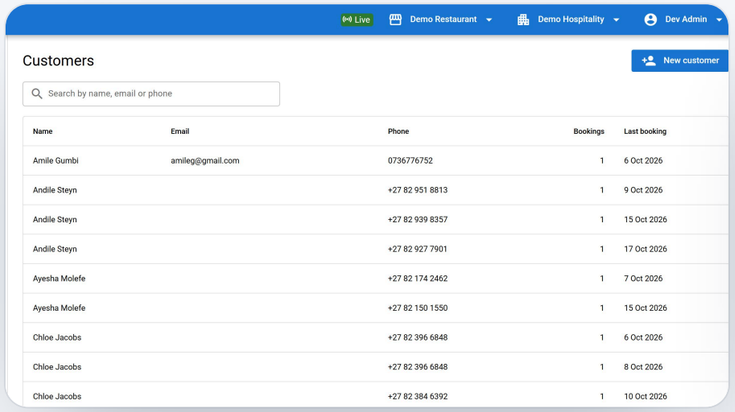

Know what is working

- **Key figures:** bookings, guests, cancellation and no-show rates.
- **Busiest days and hours** to plan staffing.
- **By channel:** phone, walk-in, staff or online.
- **Deposits** collected and refunded, plus **CSV export** for spreadsheets.

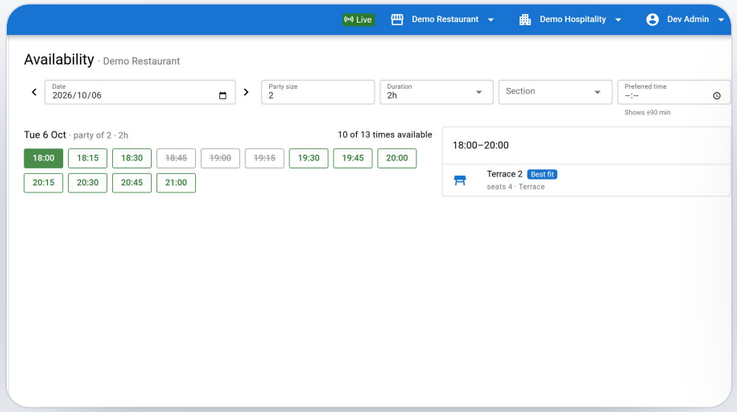

AND THE REST

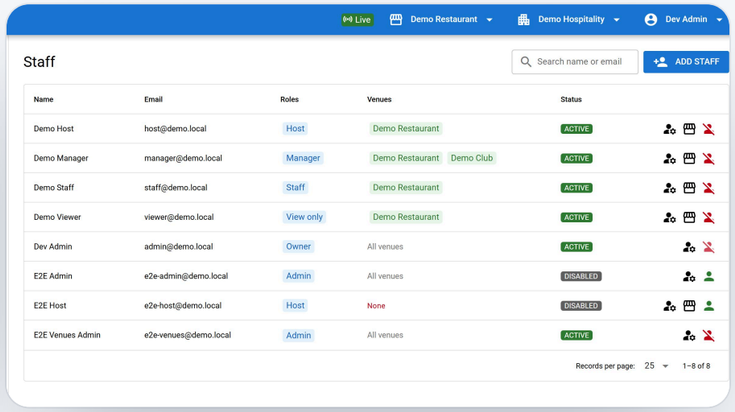

Everything a busy venue needs

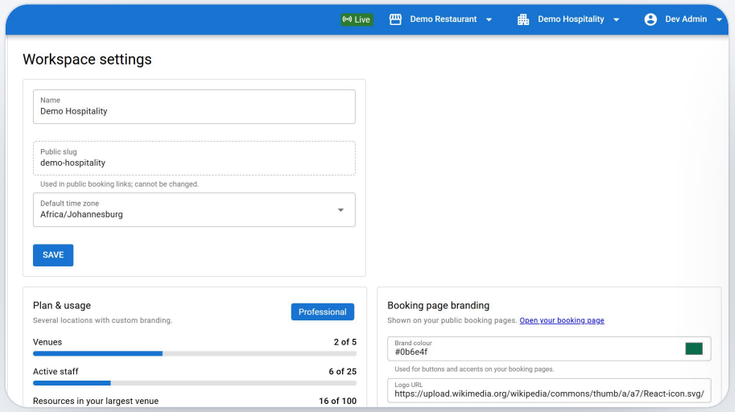

Customers history, notes, anonymise

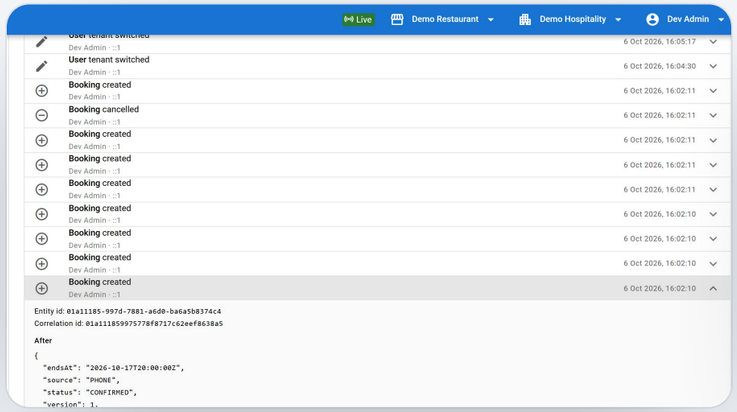

Availability what is free, and where

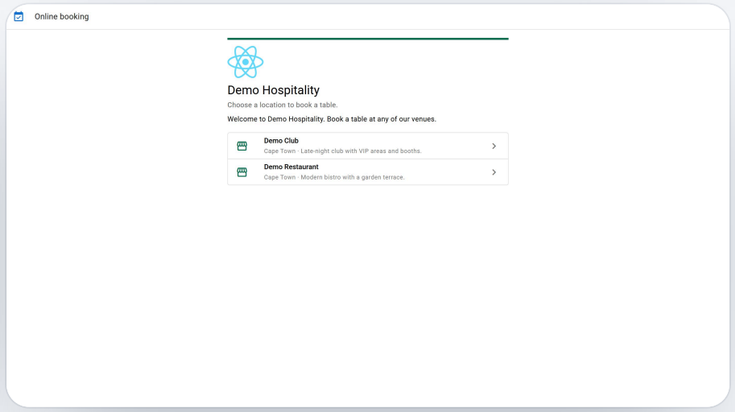

Staff roles and venue access

Settings plan usage and branding

Audit log every change, before and after

Locations page one link for every venue

SOFTWARE AS A SERVICE

Plans that grow with the business

Each business is a separate, isolated workspace on one shared platform. Reaching a limit only blocks new additions; nothing is ever removed.

Starter

A single venue getting started

- ✓ 1 venue
- ✓ 5 active staff
- ✓ 30 resources per venue
- ✓ Online booking & deposits

Professional

Growing groups

- ✓ 5 venues
- ✓ 25 active staff
- ✓ 100 resources per venue
- ✓ Custom branding

Enterprise

Large operators

- ✓ Unlimited venues
- ✓ Unlimited staff
- ✓ Unlimited resources
- ✓ Custom branding

PART FOUR

Engineered to be trusted

The rules that matter are enforced by the database and the server, never by hope.

04

NO DOUBLE BOOKINGS

Impossible, not just unlikely

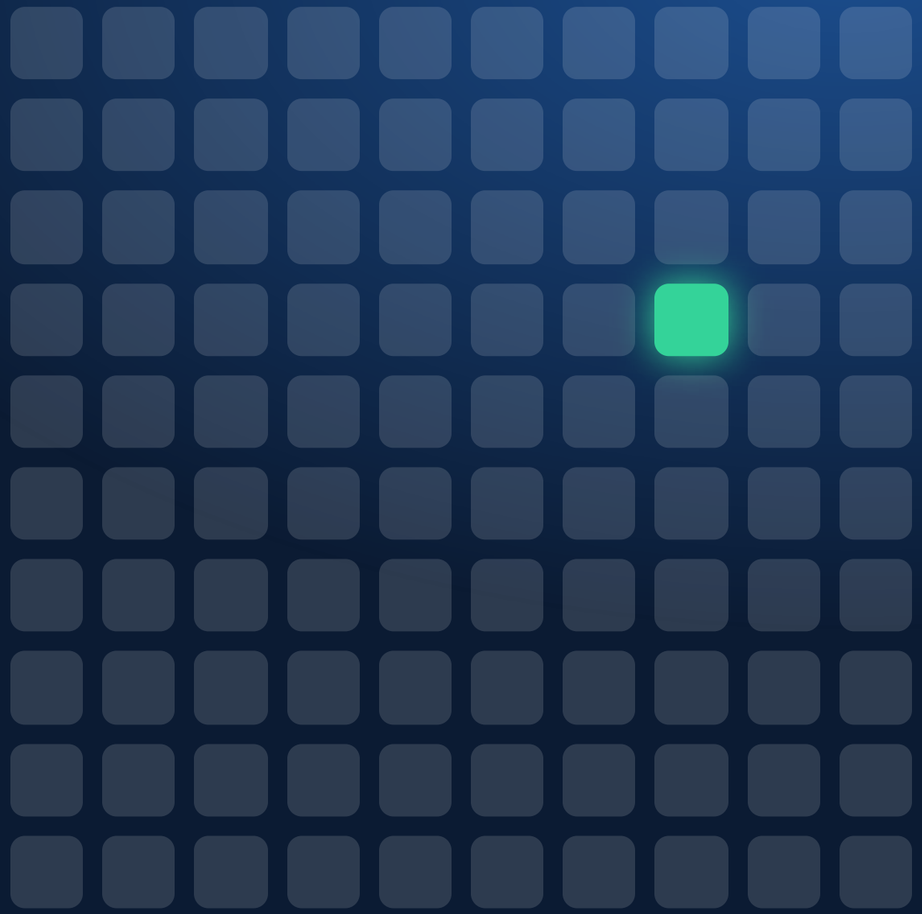

We fired 100 booking requests at the same table, for the same time, at the same instant.

1
booking created

99
told "just taken"

0
errors or duplicates

- **The database itself refuses overlaps**, using an exclusion constraint on table and time.
- **Every create is idempotent:** retries and double taps return the original booking.
- **Edits are versioned**, so concurrent changes never silently overwrite each other.

100 concurrent requests for one table, from the automated test suite and the load test.

SECURITY & PRIVACY

Secure by default, private by design

Tenant isolation

Every query is scoped to the business taken from a server-verified token, never from the browser.

Strong sign-in

PBKDF2-SHA512 password hashing, rotating refresh tokens with reuse detection, and lockouts.

Rate limits

Sign-in, password reset and every public endpoint are throttled against abuse and bots.

Least privilege

The app connects as a restricted database role: data access only, no schema changes.

Full audit trail

Every change records who made it, when, from where, and the before and after values.

Privacy tools

One-click customer anonymisation keeps bookings for reporting but removes personal data.

Hardened web app

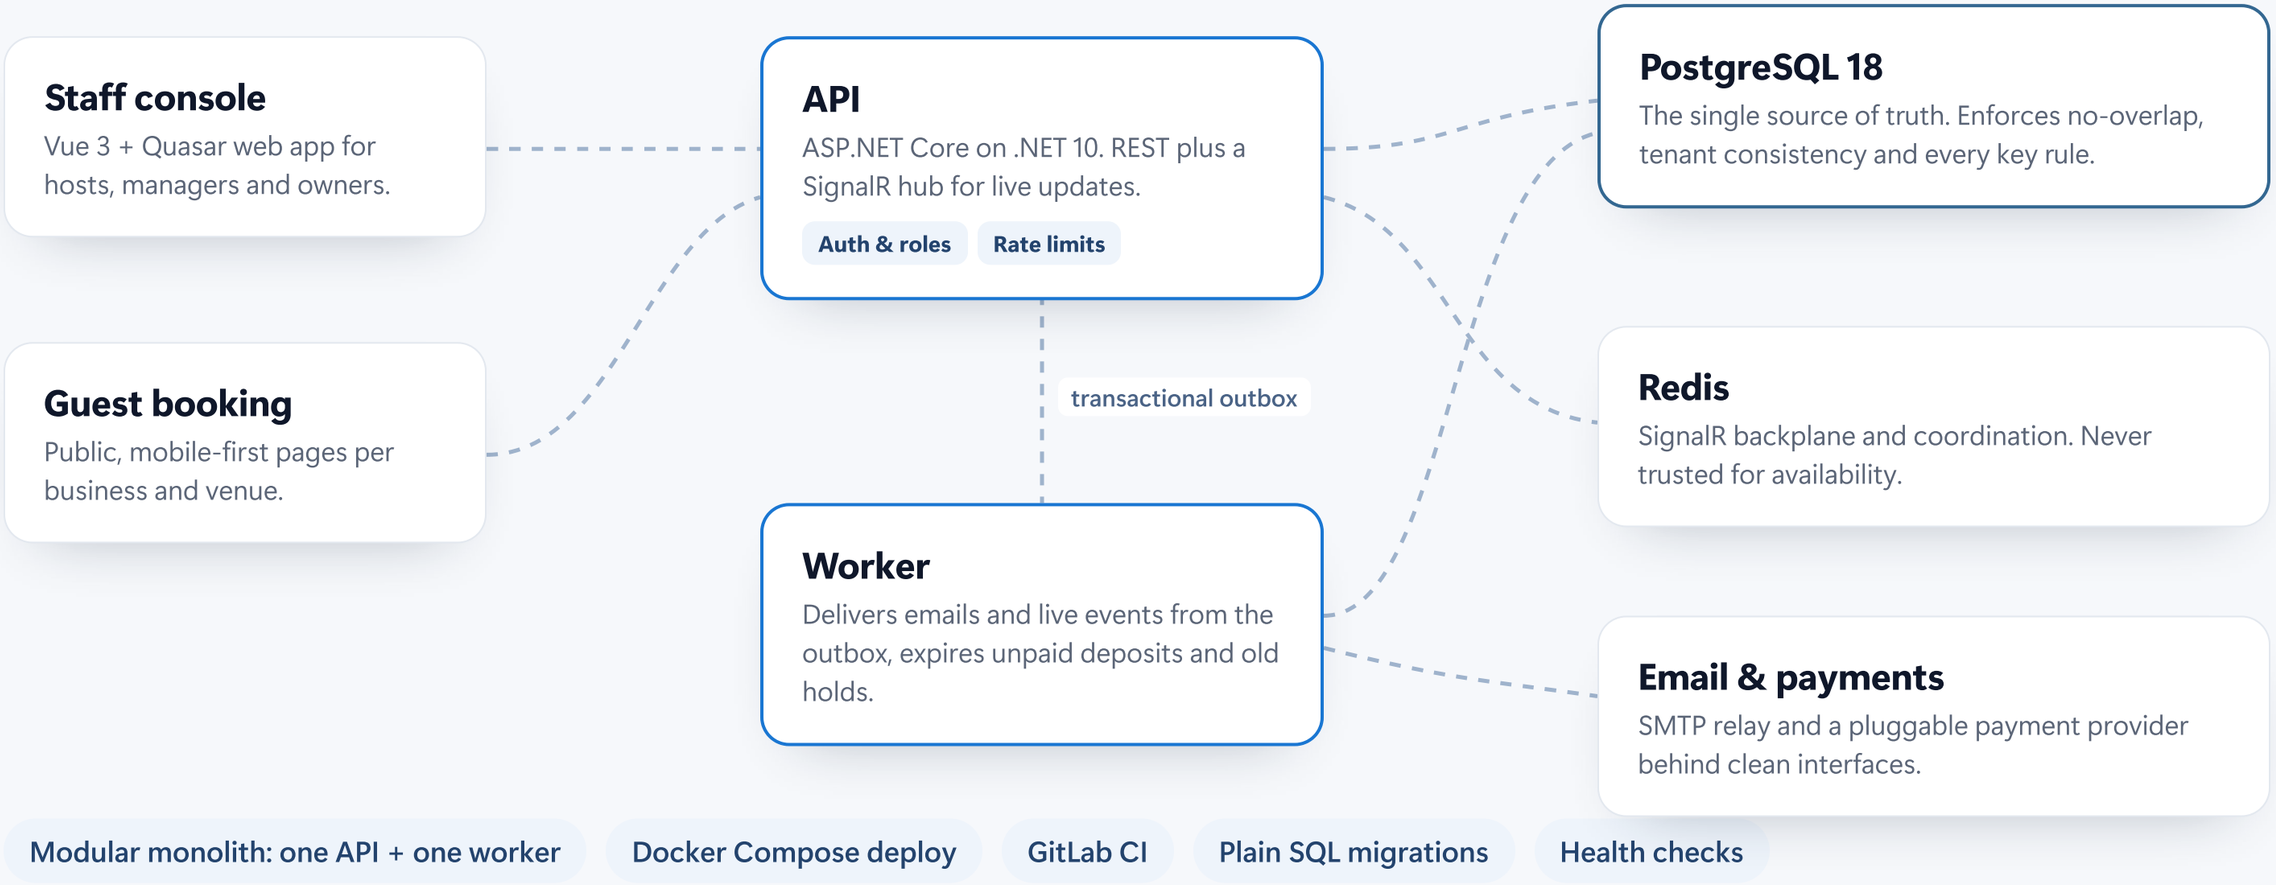

Strict Content Security Policy, security headers, and no secrets in source control.

Accessible

Meets WCAG 2.1 AA: 0 automated accessibility violations across 43 views.

ARCHITECTURE

Simple to run, built to scale

Modular monolith: one API + one worker

Docker Compose deploy

GitLab CI

Plain SQL migrations

Health checks

QUALITY

Proven, not promised

337
backend tests, run against real PostgreSQL and Redis in containers

247
frontend unit tests across stores, pages and components

6
end-to-end browser journeys, staff and guest, on a production-like stack

0
accessibility violations across 43 views, desktop and 360 px mobile

31
ordered SQL migrations, rebuilt from an empty database in CI

~550 req/s
availability and board reads at 50 concurrent users, p95 under 400 ms (local hardware)

WHAT'S NEXT

The road to launch

Ready today

- Staff console, live board and floor view
- Online booking, deposits and self-service cancel
- Teams, roles and venue access
- Reports, branding and plans
- Production Docker stack, runbooks and backups

Needed to go live

- Choose hosting and a domain
- Connect an SMTP relay for emails
- Connect a real payment provider for deposits
- Pilot with one venue

Next improvements

- Staff alerts for new online bookings
- Invite emails and admin password reset
- Suspend or reactivate a business
- Venue-neutral wording on guest pages

THANK YOU

Every seat.
Booked right.

Try it yourself: book a table as a guest, then watch it appear live on the host's board.
